This book has been authored by the Scientific Council at the University as part of the “Authoring Books” program. The book has been referred by the Compliance Committee at the Scientific Council, and the program’s Supervisory Committee has approved the publishing of this book in its 17th session of the academic year 1439/1440 H., which was convened on 3-8-1440 H. (8-4-2019).

All publishing rights are reserved. No part of the book may be republished or transmitted in any form or by any means, electronic or mechanical, including photocopying, recording, or via any storage or retrieval system without write permission from King Saud University Press.

Dedication

*In the memory of my parents, to my wife Radhia,
my son Eymen, my daughters Sondes, Zeineb, Asma and
Tasnim and their admirable families. With my love for all.*

*Mathematics is the alphabet with which
God has written the universe*

Galileo Galilei

Preface

This book is based on courses of lectures that I gave at Monastir University and King Saud University. It covers standard complex analysis material while addressing other related topics. The reader is assumed to have knowledge of the elements of the theory of functions of a real variable. A valuable aspect of this book also is the incorporation of a large number of exercises and problems with detailed solutions.

Master's students will be able to start from Chapter 3.

I would like to thank a number of people who volunteered their time and energy in reviewing one or more chapters: Hassine Elmir, Jamel Benameur, Akhlaq Siddiqui and the unknown reviewer. I express my warmest thanks to the Mathematics Department at College of Sciences, King Saud University.

I conclude this preface with a personal tribute to all my close colleagues at the universities of Monastir and King Saud University; including Professor Khalifa Harzallah, where the lesson plan is mostly rooted in his course.

This book benefited from the support of the Scientific Council at King Saud University. The author expresses his thanks to King Saud University Press.

I welcome any comments or inquiries on this document. You can reach me by e-mail at mongi_blel@yahoo.fr or mblel@ksu.edu.sa

MONGI BLEL

Contents

Dedication	v
Preface	vii
1 Complex Numbers	1
1 The Complex Numbers: Basic Concepts	1
2 Algebra of Complex Numbers	1
3 Solving Simple Equations	4
4 Polar Representation of Complex Numbers	5
5 Exponential Representation	9
6 Geometry and Complex Numbers	12
6.1 Straight Line	12
6.2 Line Segment (Interval)	13
6.3 Circles	13
7 Geometric Interpretation	14
8 Exercises	17
2 Real and Complex Functions	23
1 Sequences of Complex Numbers	23
1.1 Upper and Lower Limits of Bounded Sequences	23
1.2 Limit and Convergence of Sequences	24
1.3 Cauchy's Convergence Criterion	25
2 Topology on \mathbb{C}	26
2.1 Open and Closed Sets	26
2.2 Closure and Interior of Sets	26
2.3 Compact Sets	29
3 Compactness and Continuity	30
4 Connected Sets	31
5 Numerical Series	33
5.1 Convergence of Numerical Series	33
5.2 Cauchy Criterion	33

6	Tests of Convergence	34
6.1	Comparison Test	34
6.2	Integral Test	35
6.3	Duhamel's Rule	36
6.4	The Root Test	37
6.5	The Ratio Test	37
6.6	The Abel's Test	38
6.7	Alternating Series	40
6.8	Product of Series	40
6.9	Rearrangement	42
6.10	Tauber's Theorem	44
7	Sequences and Series of Functions	44
7.1	Sequences of Functions	44
7.1.1	Uniform Convergence	45
7.1.2	Continuity and Uniform Convergence	45
7.1.3	Integrability and Uniform Convergence	46
7.1.4	Differentiability and Uniform Convergence	48
7.2	Series of Functions	48
7.2.1	Convergence of Series of Functions	48
7.2.2	Abel's Criterion for Uniform Convergence	49
8	Power Series	51
8.1	Abel's Lemma	51
8.2	Radius of Convergence of Power Series	52
9	Exercises	54
3	Holomorphic Functions	59
1	Elementary Properties	59
1.1	Holomorphic Functions	59
1.2	The Cauchy-Riemann Conditions	60
2	Examples of Holomorphic Functions	63
2.1	Power Series	63
2.2	The Exponential Function	64
2.3	The Logarithmic Functions	66
2.4	Continuous Branch of z^α	68
3	Analytic Functions	69
3.1	Examples of Analytic Functions	69
3.2	Principle of Analytic Continuation	71
3.3	Principle of Isolated Zeros	71
4	Exercises	73

4 Local Cauchy's Theory	77
1 Complex Integration	77
1.1 Operations on Curves	77
1.2 Complex Integration	78
1.3 Length of Curves	79
1.4 Index of Closed Curves	81
2 Local Cauchy's Theory	82
2.1 Existence of Primitives	82
2.2 Case of Convex Domains	84
3 The Cauchy Theorem	85
3.1 Cauchy's Theorem for Triangles	85
3.2 Cauchy's Theorem on Convex Domains	87
4 Cauchy's Formula for the Circle	88
4.1 Analyticity of Holomorphic Functions	88
4.2 Zeros of Holomorphic Functions	89
4.3 Morera's Theorem	90
5 Exercises	91
5 Fundamental Properties	95
1 Cauchy's Inequalities and Applications	95
1.1 Cauchy's Inequalities	95
1.2 Liouville's Theorem	95
1.3 D'Alembert's Theorem	96
2 Mean Value Property and Maximum Principle	97
2.1 Mean Value Property	97
2.2 The Maximum Modulus Theorem	98
2.3 The Open Mapping Theorem	99
2.4 The Schwarz's Lemma and Applications	99
3 Convergence Theorem	101
4 Singularities of Holomorphic Functions	102
5 Meromorphic Functions	104
6 Exercises	106
6 The Residue Theorem	115
1 Cauchy's Fundamental Theorem	115
2 Simply Connected Domains	118
2.1 Homotopy	118
2.2 Characterization of Simply Connected Domains	121
3 Laurent Series	122
3.1 Laurent Series	122
3.2 Methods of Computation of Residues	125
4 The Residue Theorem	126
5 The Rouché's Theorem	128

6	Local Inversion Theorem	130
7	Mittag-Leffler's Theorem	131
8	Evaluation of Some Definite Integrals	134
8.1	Integrals of Type $I = \int_0^{2\pi} R(\sin t, \cos t) dt$,	134
8.2	Integrals of Type $I = \int_{-\infty}^{+\infty} \frac{P(x)}{Q(x)} dx$,	135
8.3	Integrals of Type $I(\lambda) = \int_{-\infty}^{+\infty} \frac{P(x)}{Q(x)} e^{i\lambda x} dx$	136
8.4	Integrals of Type $I = \int_0^{+\infty} \frac{P(x)}{Q(x)} \ln x dx$,	139
8.5	Integrals of Type $I(\alpha) = \int_0^{+\infty} \frac{P(x)}{Q(x)} x^{\alpha-1} dx$,	140
9	Exercises	142
7	The Space of Holomorphic Functions	155
1	Topology on $\mathcal{C}(\Omega)$ and $\mathcal{H}(\Omega)$	155
1.1	Topology on $\mathcal{C}(\Omega)$	155
1.2	Topology on $\mathcal{H}(\Omega)$	157
2	Montel's Theorem	158
2.1	Equicontinuous Families	158
2.2	Montel's Theorem	160
2.3	Vitali's Theorem	161
2.4	Compact Subsets of $\mathcal{H}(\Omega)$	161
3	Exercises	163
8	The Riemann's Theorem	169
1	Introduction	169
2	Examples of Conformal Mappings	170
2.1	Conformal Mappings from the Unit Disc Onto Itself . .	170
2.2	Conformal Mapping from the Upper Half-Plane Onto the Unit Disc	170
3	The Möbius Transformations	171
3.1	Basic Properties of Möbius Transformations	171
3.2	Invariance of Circles and Straight Lines under Möbius Transformations	173
3.3	The Cross-Ratio	174
3.4	Möbius Transformations and Symmetries	176
4	Applications	177
5	The Riemann's Theorem	179
6	Exercises	181

9 Harmonic Functions	183
1 Basic Properties	183
2 Extension of Harmonic Functions	185
3 The Mean Value Property	187
4 The Maximum Principle	188
5 The Dirichlet Problem	189
5.1 Poisson Formula	190
5.2 The Dirichlet Problem on the Disc	191
6 Characterization	192
7 The Rado's Theorem	195
8 The Harnack's Inequality	196
9 The Reflection Principle	197
10 Exercises	198
10 The Factorization Theorem	203
1 Basic Properties of Infinite Product	203
2 Infinite Product of Holomorphic Functions	206
3 Factorization of Entire Functions	209
4 The Gamma Euler's Function	213
5 Exercises	222
11 Problems	227
12 Solutions of Exercises	257
13 Solutions of Problems	365
Bibliography	411
Index	415
